ELLANICO EARTHMOVERS

Drill Rig
Theory Notes & Student Notebook

FREE LEARNING RESOURCE · ZIMBABWE

Drill rig systems and site awareness

Drill rigs create boreholes for exploration, construction or other site purposes. Theory includes rig configuration, mast, feed system, drill string, tooling, dust control, ground conditions and exclusion zones.

1. Learning objectives

By the end of this introductory theory topic, a learner should be able to:

- Describe the main purpose and common applications of a drill rig.
- Identify major machine systems and explain their general functions.
- Recognise common workplace hazards and the importance of pre-use checks.
- Explain why manufacturer instructions, site rules and supervised practical training are essential.

2. Main components and terminology

mast, feed system, rotary head, drill rods, bit, compressor or hydraulic power unit, control station

3. Safety and responsible work practices

Follow the drilling programme and site procedures; keep clear of rotating components; use required dust and noise controls; inspect hoses and guards; maintain exclusion zones; only trained personnel should work around drilling equipment.

4. Before practical training

Before any practical session, learners should receive a site induction, understand emergency procedures, wear the required personal protective equipment, identify exclusion zones and know who is supervising the activity. A pre-use inspection must follow the machine manufacturer's checklist and the employer's approved procedure. Defects must be reported and unsafe equipment must not be used.

5. Knowledge check

1 What are the main tasks a drill rig is designed to perform?

2 Name at least four important components or systems.

3 Why must the operator understand the machine's rated limits and manufacturer instructions?

4 Give three hazards that may be present in the work area.

5 What should a learner do if a machine appears defective or an unsafe condition is identified?

IMPORTANT TRAINING NOTICE

This notebook is introductory educational theory material. It is not an operator licence, competency assessment, manufacturer manual or substitute for supervised practical training. Machine models and procedures differ. Always follow the specific manufacturer's operating manual, applicable Zimbabwean laws and site safety requirements. Do not operate machinery unless properly trained, authorised and supervised as required.
